

10 Keyboard/Keypad Page (0x07)

This section is the **Usage Page** for key codes to be used in implementing a USB keyboard. A Boot Keyboard (84-, 101- or 104-key) should at a minimum support all associated usage codes as indicated in the “Boot” column below.

The usage type of all key codes is Selectors (Sel), except for the modifier keys Keyboard Left Control (0x224) to Keyboard Right GUI (0x231) which are Dynamic Flags (DV).

Note A general note on **Usages** and languages: Due to the variation of keyboards from language to language, it is not feasible to specify exact key mappings for every language. Where this list is not specific for a key function in a language, the closest equivalent key position should be used, so that a keyboard may be modified for a different language by simply printing different keycaps. One example is the Y key on a North American keyboard. In Germany this is typically Z. Rather than changing the keyboard firmware to put the Z Usage into that place in the descriptor list, the vendor should use the Y Usage on both the North American and German keyboards. This continues to be the existing practice in the industry, in order to minimize the number of changes to the electronics to accommodate other languages.

Footnotes 1-15, 20-34

- ¹ Usage of keys is not modified by the state of the Control, Alt, Shift or Num Lock keys. That is, a key does not send extra codes to compensate for the state of any Control, Alt, Shift or Num Lock keys.
- ² Typical language mappings: US: \| Belg: µ`£ FrCa: <|> Dan: * Dutch: <|> Fren: *µ Ger: #` Ital: ù\$ LatAm: }`] Nor: ,* Span: }Ç Swed: , * Swiss: \$£ UK: #~.
- ³ Typical language mappings: Belg: <|> FrCa: «°» Dan: <|> Dutch:]|[Fren: <|> Ger: <|> Ital: <|> LatAm: <|> Nor: <|> Span: <|> Swed: <|> Swiss: <|> UK: \| Brazil: \.
- ⁴ Typically remapped for other languages in the host system.
- ⁵ Keyboard Enter and Keypad Enter generate different Usage codes.
- ⁶ Typically near the Left-Shift key in AT-102 implementations.
- ⁷ Example, Erase-Eaze™ key.
- ⁸ Reserved for language-specific functions, such as Front End Processors and Input Method Editors.
- ⁹ Reserved for typical keyboard status or keyboard errors. Sent as a member of the keyboard array. Not a physical key.
- ¹⁰ Windows key for Windows 95, and "Compose."
- ¹¹ Implemented as a non-locking key; sent as member of an array.
- ¹² Implemented as a locking key; sent as a toggle button. Available for legacy support; however, most systems should use the non-locking version of this key.
- ¹³ Backs up the cursor one position, deleting a character as it goes.
- ¹⁴ Deletes one character without changing position.
- ¹⁵⁻²⁰ See additional foot notes below.
- ²¹ Toggle Double-Byte/Single-Byte mode.
- ²² Undefined, available for other Front End Language Processors.
- ²³ Windowing environment key, examples are Microsoft Left Win key, Mac Left Apple key, Sun Left Meta key
- ²⁴ Windowing environment key, examples are Microsoft® RIGHT WIN key, Macintosh® RIGHT APPLE key, Sun® RIGHT META key.
- ²⁵ Hangul/English toggle key. This usage is used as an input method editor control key on a Korean language keyboard.
- ²⁶ Hanja conversion key. This usage is used as an input method editor control key on a Korean language keyboard.
- ²⁷ Keypad Comma is the appropriate usage for the Brazilian keypad period (.) key. This represents the closest possible match, and system software should do the correct mapping based on the current locale setting.
- ²⁸ Keyboard International1 should be identified via footnote as the appropriate usage for the Brazilian forward-slash (/) and question-mark (?) key. This usage should also be renamed to either "Keyboard Non-US / and ?" or to "Keyboard International1" now that it's become clear that it does not only apply to Kanji keyboards anymore.

- 29 Used on AS/400 keyboards.
- 30 Defines the Katakana key for Japanese USB word-processing keyboards.
- 31 Defines the Hiragana key for Japanese USB word-processing keyboards.
- 32 Usage 0x94 (Keyboard LANG5) "Defines the Zenkaku/Hankaku key for Japanese USB word-processing keyboards.
- 33 The symbol displayed will depend on the current locale settings of the operating system. For example, the US thousands separator would be a comma, and the decimal separator would be a period.
- 34 The symbol displayed will depend on the current locale settings of the operating system. For example the US currency unit would be \$ and the sub-unit would be ¢.
